Ecoscenarios, Click on an ecosystem, Click food Web

We will look at Mono Lake as an example, you will need to choose a different foodweb. You will need to include at least 11 organisms in your foodweb to get checked off, but see if you can make it work using all organisms!

Caution: FOSS does not care about arrow direction, but I do.

Learning I can identify complex feeding relationships in different ecosystems.

Target: I can demonstrate this understanding with a food web.
