## AIR-TROLLEY CONSTRUCTION

## Materials

1 Jumbo straw
1 Super jumbo straw
1 Index card
1 Propeller
1 Hook

1 Rubber band
1 Meter tape
1 Scissors

- Transparent tape
- Clear packing tape, $2^{\prime \prime}$ wide
a. Cut the super jumbo straw (larger diameter) at 11 cm .

$$
\text { Super jumbo }-11 \mathrm{~cm}
$$

Cut the jumbo straw at 15 cm .
b. Fold the index card in half. Tape the edge.

c. Use the wider clear packing tape
 for this assembly. Center everything before taping. Tape the two straw pieces to the short edges of the folded card.
d. Attach a propeller to one end of the super jumbo straw and a hook to the other end. Connect the propeller and hook with the rubber band.

2. This time the vehicles started at the positions shown at $x_{\mathrm{i}}$, but the truck was going half as fast as it was in problem 1.

Show math and units in these boxes.
a. Where would the truck be at 3:30 p.m.?
$\qquad$
b. How far would the truck have traveled at 9:30 p.m.?
$\qquad$
c. How far would the car have traveled at 3:00 p.m.?
$\qquad$
d. What is the equation for calculating distance when you know the speed and time?
e. What is the total distance traveled by both vehicles (added together) at 5:00 p.m.? $\square$

Name $\qquad$

## SPEED AND DISTANCE PRACTICE A

1. Bonnie rode her skateboard 200 meters (m) in 30 seconds (s). Raul rode his unicycle 300 m in 50 s . Who traveled faster? How much faster?
2. It is about 384,750 kilometers $(\mathrm{km})$ from Earth to the Moon. It took the Apollo astronauts about 2 days and 19.5 hours to fly to the Moon. How fast did they travel?
3. A chipmunk can run $5 \mathrm{~m} / \mathrm{s}$. A fox can run $8 \mathrm{~m} / \mathrm{s}$. If the chipmunk and fox start running at the same time, will the chipmunk make it to its burrow in time?

4. Rita flew from Los Angeles to Boston to visit her aunt, a distance of 4000 km . The trip took 5 hours (h). What was the average speed of the jet?
5. A truck left a diner at 1:00 p.m. and drove 360 km to Jersey City. The truck arrived at 7:00 p.m. A car left the same diner at 2:00 p.m. and drove to Jersey City at an average speed of $80 \mathrm{~km} / \mathrm{h}$.
a. How fast did the truck travel?
b. Which vehicle got to Jersey City first?
6. An Arctic tern can fly $85 \mathrm{~km} / \mathrm{h}$ for 24 h straight. How far can it fly before landing?
7. Rosita started riding her bike 3 km to her friend Gena's place at exactly the same time Gena started skating to Rosita's house. Gena, of course, wasn't home, so Rosita rode back home. The two girls arrived at Rosita's house at the same time. It took Rosita 30 minutes to ride to Gena's and back. How fast did Gena skate?

Rosita's
Gena's
$\qquad$

## SPEED AND DISTANCE PRACTICE B

8. A hiker wanted to hike to a lake 26 km from the end of the road. She started at 6 a.m. and walked steadily until 9:00 a.m. She stopped for a 1-hour rest and then continued until she stopped for 1.5 h to have lunch. She took only one 0.5 h rest in the afternoon and arrived at the lake at 7:00 p.m.
a. What was the hiker's average speed from the end of the road to the lake?
b. What was the hiker's average speed during the time she was actually hiking?
9. Ron put 16 gallons (gal.) of gas in his truck and reset the trip odometer to 0 . He drove until he ran out of gas. The odometer read 480 km . How many kilometers per gallon does Ron's truck get?
10. Beth's motor scooter gets 110 km / gal. How far can she go on 2.5 gal. of fuel?
11. A champion jumping frog can jump 2.5 m every 4 s . What is the jumping frog's average speed?
12. An ostrich can run 10 km in 15 minutes. What is its speed in kilometers/hour?
13. A basketball rolled 300 m down a hill in 25 s . What was its average speed down the hill?
14. A commuter got on the train at the Oakdale Station at 6:50 a.m. She got off at Metro Station at 8:05 a.m. The train made five 3-minute stops along the way. Oakdale is 21 km from the end of the line, and Metro Station is 96 km from the end of the line.
a. What was the commuter's average speed getting to work?
b. What was the average speed of the train while it was under way?

$\qquad$
$\qquad$
Period Date $\qquad$
RESPPONSE SHEEET-STPEED.

kilometers

Abbi looked at the representation of the road trip shown above and said,
I know how far the car went and how long it took to get there, but I'm not sure how fast it went.

Gwen said,
Here, I'll show you how to figure out how fast the car was going.

1. What do you think Gwen showed Abbi?
2. Show Abbi and Gwen how to figure out how far the car had gone after 2.5 hours.
$\qquad$

## SPEEDING DOWN SLOPES

Part 1: Gather data.
a. The elevation your team worked with was $\qquad$ .
b. The distance you ran your car was 200 cm .
c. You ran $\qquad$ trials.
d. Enter your raw data.
e. Calculate the average time it took the car to travel 200 cm . Use a calculator.

| Time trials <br> (s) |
| :---: |
|  |
|  |
|  |
|  |
|  |
|  |

f. Calculate the car's average speed.

Write the equation and show your math.

Average speed

Part 2: Graph results.
a. Copy the other teams' time and elevation data to your table.
b. Graph distance versus time for each elevation.

$\qquad$

## AVERAGE SPEED PRACTICE A

1. When Belinda walks to school in the morning, it takes her 12 minutes to walk the 1 kilometer (km). When she walks home after school with her little sister, it takes twice as long. Does Belinda's speed increase or decrease when she walks with her sister?
2. Frank's car rolled 300 centimeters (cm) in 1.5 seconds (s).

Noah's car rolled 360 cm in 2 s .
Whose car ran on a steeper ramp?
3. A biker rode up a $20-\mathrm{km}$ hill in 2 hours and down the hill in 0.5 hour without stopping. What was his average speed
a. going up the hill?
b. going down the hill?
c. for the whole trip?
4. It took Ellie 4 hours to paddle her canoe 10 km upstream. After a leisurely 3-hour picnic, she paddled back home in 1 hour.
a. How fast did Ellie paddle upstream?
b. What was Ellie's average speed while she was paddling her canoe?
5. Mark's family drove 180 km to the beach at $90 \mathrm{~km} / \mathrm{h}$. They drove home at $60 \mathrm{~km} / \mathrm{h}$. What was their average driving speed for the time they were on the road?
6. Three girls raced their model cars down a 40 -meter track. Their times are in the table. What was the average speed at which the cars rolled down the track?

|  | $\Delta \boldsymbol{t}(\mathbf{s})$ | $\boldsymbol{d}(\mathbf{m})$ |
| :--- | :---: | :---: |
| Jessica | 10 | 40 |
| Kristi | 20 | 40 |
| Laticia | 8 | 40 |

7. Ben took off in a plane at 9:30 a.m. from Seattle and landed in Baltimore, 4030 km away, at 7:00 p.m. There was a 1.5-hour layover in Denver. (The time in Baltimore is 3 hours later than in Seattle.)
a. What was Ben's average speed on his trip from Seattle to Baltimore?
b. What was the plane's average speed while in the air?
$\qquad$
Period $\qquad$ Date $\qquad$

## AVERAGE SPEED.PRACTICE B

8. A high school varsity hardball pitcher can throw his fastball 28.5 m in 0.75 s . A high school varsity softball pitcher can throw her fastball 12.0 m in 0.3 s . Which pitcher's ball travels faster?
9. A boat sailed out to an island at a speed of $18 \mathrm{~km} / \mathrm{h}$ in 4 h and then immediately sailed back to port at $36 \mathrm{~km} / \mathrm{h}$ in 2 h . What was its average speed for the trip?
10. Sweta entered a skate, row, and bike race. Her time and distance for each leg of the race are entered in the chart.
a. What was Sweta's average speed for each leg?
b. What was her average speed over the whole race?

|  | $\Delta \boldsymbol{t}(\mathbf{h})$ | $\boldsymbol{d}(\mathbf{k m})$ | $\boldsymbol{v}(\mathbf{k m} / \mathbf{h})$ |
| :--- | :---: | :---: | :---: |
| Skate | 1.25 | 20 |  |
| Row | 0.75 | 6 |  |
| Bike | 2.5 | 100 |  |

11. Biff's dog loves to catch his tennis ball. It takes the ball 5 s to fly 60 m .
a. How fast does Biff's dog have to run to catch it?
b How fast is that in kilometers per hour?
12. Lily's family took a motor boat 24 km down a river for a picnic. It took them 1 h to get to the picnic spot. The ride back to the dock took an hour and a half.
a. What was the boat's average speed going to the picnic?
b. What was the boat's average speed coming home from the picnic?
c. What was the boat's average speed for the whole boat ride to and from the picnic?
d. What was the average speed at which the river flowed?
e. What would the boat's average speed be on a lake?
13. What is the average speed of an arrow that takes 1.25 s to hit a target 75 m away?
$\qquad$
$\qquad$ Date $\qquad$
WALK AND. RUN SPEEDS
a. Write the name of your group's walker and runner in the tables.
b. Record the distance that will be traveled.
c. Time three walks and three runs. Record the times in the tables.

| Walker's name | $\Delta \boldsymbol{t}_{\mathbf{1}}$ (s) | $\Delta \boldsymbol{t}_{\mathbf{2}}$ (s) | $\Delta \boldsymbol{t}_{\mathbf{3}}$ (s) | $\Delta \boldsymbol{t}_{\mathrm{av}}$ (s) | $\boldsymbol{d}(\mathbf{m})$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |

| Runner's name | $\Delta \boldsymbol{t}_{\mathbf{1}}$ (s) | $\Delta \boldsymbol{t}_{\mathbf{2}}$ (s) | $\Delta \boldsymbol{t}_{\mathbf{3}}$ (s) | $\Delta \boldsymbol{t}_{\mathrm{av}}$ (s) | $\boldsymbol{d}$ (m) |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |

d. Calculate the average time for the walker and for the runner.
e. Calculate the average speed for the walker and the runner. Show your math.
f. Graph the average walking speed and the average running speed on this grid.

$\qquad$
$\qquad$

Your walker and your runner will have a race. These are the objective and rules.
Objective: The walker and runner should cross the finish line at the same time.

## Rules

- The race distance is 20 meters.
- The walker and runner must maintain constant speed. Don't slow down or speed up.
- You can use a time head start or a distance head start to achieve your objective.

## 20-meter race

| Walker's name | Starting position | Starting time | $\Delta \boldsymbol{t}(\mathbf{s})$ | $\boldsymbol{d}(\mathrm{m})$ |
| :--- | :--- | :--- | :--- | :--- |

## IDITAROD

The Iditarod is a dog-sled race run each year in March. The mushers start in Anchorage, Alaska, and race to Nome. The distance is about 1800 kilometers ( 1125 miles).

In 1986 Susan Butcher won the race. Her record-breaking time was 11 days and 15 hours.
At each checkpoint the dogs were fed, rested, and examined by a vet. This took an average of 3 hours at each checkpoint. In addition, each team was required to make one 24 -hour stop at one of the checkpoints, and two 8 -hour stops at two other checkpoints.

1. What was the average speed of the dog team from start to finish?
2. What was the average speed of the dog team while it was actually on the trail?

| 0 |  |  | 0 | 0 | 0 |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |

## Leisurely Walk 2

Start at home.
Walk to the destination.
Look at view 15 seconds.
Walk back home.

| Leg | $\Delta t$ <br> $(\mathrm{~s})$ | $\Delta x$ <br> $(\mathrm{~m})$ | $t$ <br> $(\mathrm{~s})$ | $x$ <br> $(\mathrm{~m})$ | $d$ <br> $(\mathrm{~m})$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |

## Leisurely Walk 3

Start at home.
Walk to the destination, turn, walk halfway home.

Stop and rest 10 seconds.
Complete the walk home.

|  | $\Delta t$ | $\Delta x$ | $t$ | $x$ | $d$ |
| :--- | :---: | :---: | :---: | :---: | :---: |

## ROAD TRIP <br> - - - • -

Hi Beth, this is Rita. I moved. I left Toledo at 9:00 a.m. on Saturday and drove 700 km . I arrived in Nashville at 7:00 p.m. and spent the night. I arrived in Birmingham Sunday afternoon at 5:00 p.m. I now know it is 1000 km from Toledo to Birmingham.
Actually, Beth, the trip didn't go exactly like that. Sunday morning at 9:00, I realized I left my credit card in Louisville when I stopped for gas. It took me 2 hours to drive back 200 km for it. I was so mad. Then I got on the road and made it to Birmingham.

a. Fill in your data table.
b. Make a position graph of Rita's road trip.
c. Make a distance graph of Rita's road trip.
$\qquad$
$\qquad$

1. During which leg of the trip was Rita's speed the fastest?
2. What was Rita's average speed on her trip between Toledo and Birmingham?
3. What was Rita's average speed while she was actually driving on the road?
$\qquad$
$\qquad$

## RESPONSE SHEET—REPRESENTING MOTION

Home

Marybeth and two friends went on a leisurely outing. They walked to the park 1500 meters from Marybeth's house.

They watched the skateboarders awhile.
Then they took the bus toward home.
They got off at the pizza shop and shared a pineapple and ham pizza. They walked the remaining 500 m home.

Marybeth and her two friends made motion graphs of the outing. Which graph or graphs represent Marybeth's movements during the outing?

Explain which graph or graphs represent Marybeth's movements.

Track 1 (long)

Track 2 (short)

Walk the length of the long track and the short track.
Walk at a speed that will bring you to each number as it is called out. (The whole walk will take 8 seconds.)

The distance from the start ( 0 seconds) to each of the numbers is recorded in the data tables. Fill in the rest of both data tables.

Make position-versus-time graphs for both tracks.

1. Compare your positions $(x)$ on the two tracks after 8 seconds.
$\qquad$
$\qquad$
$\qquad$
2. Compare your velocities $(v)$ as you traveled on the two tracks.
$\qquad$
$\qquad$
$\qquad$
3. Compare your change of velocity $(\Delta \bar{v})$ as you traveled the two tracks.
$\qquad$
$\qquad$
$\qquad$
4. Discuss the difference between constant velocity and acceleration.

## Period

$\qquad$

## DOTMAKER A

Select the movie group called Bike Walk.
a. Choose the movie called Bike Walk 1.
b. Play the movie and watch the action. Then press Rewind.

## Select walker from the "choose an object" menu.

a. Choose a reference point on the yellow-shirted walker, like his nose.
b. Use the cross hairs to place a dot on the reference point.
c. Use the Step button to advance the action five frames (five clicks).
d. Place another dot on the reference point.
e. Continue placing dots on the reference point every five frames.

## Select bicyclist from the "choose an object" menu.

a. Click Rewind. Click the Step button until the bike enters the scene.
b. Choose a reference point on the bike and place a dot.
c. Place a dot on the bike's reference point every five frames.

1. Which moving object, the walker or the bicyclist, traveled faster? (Click Hide Movie to see the dots clearly.) $\qquad$
2. How do you know which object was faster?
$\qquad$
$\qquad$
3. Click the Graph Data button, then the Automatic button to see graphs of the two motions. Are the objects traveling at constant velocity or accelerating?
$\qquad$
4. What additional information is provided by the graphs?
$\qquad$
$\qquad$

Compare additional movies.
You can compare the movement of up to four moving objects in a movie group.
The objects can be in the same movie or in different movies.
You can place dots close together (every frame) or far apart (every ten or more frames).

## Comparison 1

I selected these movies: $\qquad$
I placed dots every $\qquad$ frames.

This is what I learned about these moving objects.
$\qquad$
$\qquad$
$\qquad$

## Comparison 2

I selected these movies: $\qquad$
I placed dots every $\qquad$ frames.

This is what I learned about these moving objects.
$\qquad$
$\qquad$
$\qquad$

## Comparison 3

I selected these movies: $\qquad$
I placed dots every $\qquad$ frames.

This is what I learned about these moving objects.

$\qquad$
$\qquad$
$\qquad$

## RESPONSE SHEET-ACCELERATION

Quinn and Mattie watched two skiers go by on a trail. They noticed that both skiers pushed one ski pole into the snow exactly once per second. They studied the trail after the skiers went past.

Skier 1

Quinn said,
It looks to me like skier 1 was accelerating. He was going fast all the way.
Mattie said,
It looks to me like skier 2 was accelerating. He was going slower at the start.
Discuss Quinn's and Mattie's ideas about the skiers.

$\qquad$
$\qquad$
$\qquad$

## PUSHER ASSEMBLY

## Materials

1 Vial and cap with hole
1 Wood dowel, drilled and marked

1 Paper slider
1 Scissors

1 Rubber band

## Assembly

a. Cut the rubber band on an angle to make a rubber strand with pointed ends.

b. Push the rubber strand through the hole in the dowel and tie a knot at each end. The knots should be close to the ends of the strand.

c. Push the dowel through the hole in the vial from the bottom. Push the ends of the rubber strand into the notches in the lip of the vial. The knots should be inside the vial.

d. Snap the cap on the vial and slide the paper slider onto the dowel.

Name $\qquad$
$\qquad$

Part 1: Pushing and pulling different masses
You will need one pusher and three masses.

1. How much force does it take to push

Three trials
Average
1 mass?
3 masses?

Predict the force required to push 2 masses.
What force was needed to push 2 masses?
2. How much force does it take to pull

1 mass?
3 masses?

Predict the force required to pull 2 masses.
What force was needed to pull 2 masses?
Three trials
$\qquad$
$\square$
$\qquad$
$\qquad$
3. What is the relationship between the mass of an object and the force needed to slide it across a surface?
$\qquad$
$\qquad$
$\qquad$

## Part 2: Push against push

You will need two pushers.

1. What happens when pusher A and pusher B both push with a $4-N$ force on each other?

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## PUSHES AND PULLS B

2. Hold pusher A still and push with a $4-\mathrm{N}$ force with pusher B.

a. What happened to pusher A?
$\qquad$
$\qquad$
b. Explain why that happened.

## Part 3: Forces on cars

You will need two pushers and one Dotcar.

1. What happens when pusher A pushes with a $2-\mathrm{N}$ force on one side of the car and pusher B pushes with a $3-\mathrm{N}$ force on the other side of the car?

$\qquad$
$\qquad$
$\qquad$
2. What happens when pusher A pulls with a $6-\mathrm{N}$ force on one side of the car and pusher B pulls with a 6-N force on the opposite side of a car?

$\qquad$
$\qquad$
$\qquad$

Name $\qquad$
Period $\qquad$ Date $\qquad$

## PUSHES AND PULLS C

3. Apply a $2-\mathrm{N}$ pull with pusher A and a $2-\mathrm{N}$ push with pusher B on the car.

a. Explain what happens to the car when the forces are applied.
$\qquad$
$\qquad$
$\qquad$
b. How could you use one pusher to produce the same result?
$\qquad$
$\qquad$
$\qquad$
4. What causes cars to move?
$\qquad$
$\qquad$
$\qquad$

## FORCE AND SLEDS

Set up a pulley and load system. Use it to answer the following questions.

1. Use a spring scale to lift a load attached to a string that runs over a pulley. How much force is needed to lift the load?
2. How much force is needed to lift the load when you have a sled between the end of the string and the scale?
3. How much force is needed to lift the load with $1,2,3$, and 4 masses on the sled?

| Masses <br> on sled | Force (N) to <br> lift the load | Change of <br> force (N) | Force (N) to lift the <br> load using rollers | Change of <br> force (N) |
| :---: | :--- | :--- | :--- | :--- |
| 0 |  |  |  |  |
| 1 |  |  |  |  |
| 2 |  |  |  |  |
| 3 |  |  |  |  |
| 4 |  |  |  |  |

4. How much force is needed to lift the load when straw rollers are placed under the sled and $1,2,3$, and 4 masses are placed on the sled?
$\qquad$
$\qquad$
$\qquad$
5. Friction exerts a force to oppose movement. What did you find out about friction?
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

6. Willie's class found that the cart will move when pushed with 50 newtons of force. When Willie pushed on the cart with 10 newtons of force, why didn't the cart move?
$\qquad$
$\qquad$
$\qquad$

7. Willie pushed on the cart with 500 newtons of force. Jenny pushed on the other side of the cart. The cart didn't move. How much force did Jenny apply?
Why do you think so?
$\qquad$
$\qquad$
$\qquad$

8. Willie and Biff pushed on the cart and it didn't move. Biff pushed with 400 newtons of force. How much force did Willie apply?
$\qquad$
$\qquad$
$\qquad$
$\qquad$

9. Alexa pushed on a cart against the wall with 500 newtons of force. The cart didn't move. How do you explain what happened?
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

10. Willie pushed on the cart with 1000 newtons of force. James pulled on a rope attached to the cart with 500 newtons of force. Biff pushed on the cart with 400 newtons.
What will happen to the cart and why?

$\qquad$

## RESPONSE SHEET-FORCE

Gloria wanted to move her compost bin. She hitched her roach-hound team to one side of the bin. She pushed on the other side. She couldn't get it to move. Gloria said,

Billie and I moved that compost bin last week. I thought the hounds and I could move it this
 week.

How would you expain the two different outcomes to Gloria?

Gloria can push with 500 newtons (N). Billie can push with 200 N. Each hound can pull with 100 N.

## FORCE BENCH EXPERIMENTS

The force gizmo can push or pull, depending on which button you push.
o push
o pull
You can decide when to start applying force and when to end the force by putting numbers in the Start and End boxes. When the start time is set to zero, the force starts as soon as you press the Exert button.

|  |  |
| :--- | :--- |
| start | 2 |
| end | 2 |
|  |  |

You can select the number of masses to load on the sled and whether the sled is sliding on a surface with friction or without it.

## Force Bench problems

1. Make the sled go slowly for 2 seconds and then speed up with both gizmos pushing.

2. Make the sled go slowly for 2 seconds and then speed up with one gizmo pushing and one pulling.

3. Make the sled move off-screen to the right and then return to its starting position.

4. Make the sled move to the right slowly, pause 3 seconds, and then move off-screen left.

5. Put three masses on the sled and make the surface frictionless. Exert a force of 5 newtons on the left side of the sled for 2 seconds. Explain what you observe.

## CALCULATING VELOCITY AND DISTANCE <br> 

If you know

- an object's acceleration, and
- how long it has been accelerating,
you can calculate its velocity and distance (or position).

1. The equation for calculating velocity $(\bar{v})$ is $\bar{v}=a \times t$, where $a$ is acceleration and $t$ is time.
2. The equation for calculating total distance traveled $(d)$ is $d=\frac{a \times t^{2}}{2}$, or $\frac{1}{2} a t^{2}$ where $a$ is acceleration and $t$ is time.

Example. A soccer ball was dropped from a window in a tall building. It hit the ground in exactly 3 seconds. How fast was it going when it hit the ground? How far did it fall?

We know the ball is accelerating at $10 \mathrm{~m} / \mathrm{s}^{2}$ (the acceleration due to gravity). Using the velocity equation (1) and a time of 3 seconds, we can make the following calculation:
$\bar{v}=a \times t=10 \mathrm{~m} / \mathrm{s}^{2} \times 3 \mathrm{~s}=30 \mathrm{~m} / \mathrm{s}$, the velocity at 3 s , the time it hit the ground.

Using the distance equation (2), we can calculate how high the window was.

$$
d=\frac{a \times t^{2}}{2}=\frac{10 \mathrm{~m} / \mathrm{s}^{2} \times(3 \mathrm{~s})^{2}}{2}=\frac{10 \mathrm{~m} / \mathrm{s}^{2} \times 9 \mathrm{~s}^{2}}{2}=\frac{90 \mathrm{~m}}{2}=45 \mathrm{~m}
$$

$\qquad$

## VELOCITY AND DISTANCE PRACTICE

1. A jet airplane taxied down the runway at a constant acceleration of $3 \mathrm{~m} / \mathrm{s}^{2}$. It lifted off 30 seconds after starting its taxi. How fast was the plane going when it left the ground, and how far down the runway had it gone? (To convert meters per second into kilometers per hour: $\mathrm{km} / \mathrm{h}=\mathrm{m} / \mathrm{s} \times 3.6$.)
2. A bowling ball started rolling down a long, gentle slope at constant acceleration of $10 \mathrm{~cm} / \mathrm{s}^{2}$. How fast would it be going after 2 minutes and how far down the slope would it be?
3. It takes a parachute 4 seconds to open. What is the lowest platform a sky diver could safely jump from? How fast would she be going just as the chute opens?
4. A soccer player kicked a ball straight up in the air. It hit the ground exactly 5 seconds after the ball left the kicker's foot. How high did the ball go and how fast was it traveling when it hit the ground? (Hint: The upward and downward parts of the ball's flight take exactly the same amount of time.)
5. Jack made an air trolley powered by a balloon. The trolley can accelerate at a constant acceleration of $2 \mathrm{~m} / \mathrm{s}^{2}$ for 2 seconds. How far does the trolley go before the air runs out? If Jack got a larger balloon that could accelerate the balloon twice as long, how far would the trolley go before running out of air?
6. How long would it take a free-falling sky diver to reach a velocity of $180 \mathrm{~km} / \mathrm{h}$ ? How far would he fall before reaching that velocity?

Name
Period Date

## RESPONSE SHEET-GRAVITY

Donna said,
I think a falling apple would accelerate more slowly on the Moon than on Earth because the force of gravity is less.
Anita said,
I think a falling apple would accelerate faster on the Moon than on Earth because there is no air on the Moon.

Who do you think has a better idea? Explain your reasons.

## TESTING GALILEO'S RULE

a. Look at your Dotcar data. Divide it into four to seven equal time intervals. Note: Time intervals on steep ramps might be two- or three-tenths of a second long. Time intervals on low ramps might be five-tenths of a second. Write your time interval here.

Time interval $\qquad$
b. Fill in the $x$ column on the table. This is Dotcar's position compared to the start position $(x=0)$, not change of position during each time interval.
c. Calculate the $\Delta x$ column on the table. This is the change of position during each time interval.
d. Fill in the theoretical change of position column by multiplying your first $\Delta x$ by the number in the column.
e. Compare your experimental $\Delta x$ values to the theoretical $\Delta x$ values.

| Time <br> interval | Position $x$ <br> $(c m)$ | Change of <br> position $\Delta x(c m)$ | Theoretical change of <br> position $\Delta x(c m)$ |  |

## RUNAWAY FLOAT A

## Materials

1 Float (Dotcar)
1 Ramp and surface

- Ramp prop

1 Pusher
2 Washer bundles
1 Meter tape

- Masking tape
- Sweaters or towels

## Experimental Setup

a. Set up a ramp with one end raised 20 cm . Attach the plastic ramp surface to the board. Tape down the bottom of the ramp.
b. Tape the pusher to the table so that the end of the dowel is 10 cm from the end of the ramp. Make sure the tape doesn't touch the rubber band on the pusher.
c. Use tape to mark $30 \mathrm{~cm}, 60 \mathrm{~cm}$, and 90 cm from the bottom edge of the ramp.
d. Use sweaters or towels to set up a soft wall around the pusher to capture stray floats.

## Procedure

a. Zero your pusher.
b. Position the float facing downhill with its front bumper right on the $30-\mathrm{cm}$ line.
c. Aim for the pusher dowel and release the float.
d. Record the force data.
e. Repeat the process with the float at 60 cm and 90 cm .
f. Repeat steps a-e with one washer bundle on board.
g. Repeat steps a-e with two washer bundles on board.

6. What causes injury and death when people are in car crashes?
$\qquad$

## RESPONSE SHEET-MOMENTUM

If you drop an egg on the floor from a height of 2 meters, it will break. How can you drop that egg to prevent it from breaking?

Cindy said,
Drop it on a pillow. That will change the egg's inertia when it lands. Too much inertia makes the egg break.

Perry said,
Wrap it in foam rubber. That will extend the time that force is applied to the egg as it lands. Too much force makes the egg break.

Lily said,
Put air bags on it. That will give the egg less momentum as it falls. Too much momentum makes the egg break.

Comment on the students' ideas and their explanations for why the egg breaks.
